## ReSound Live™

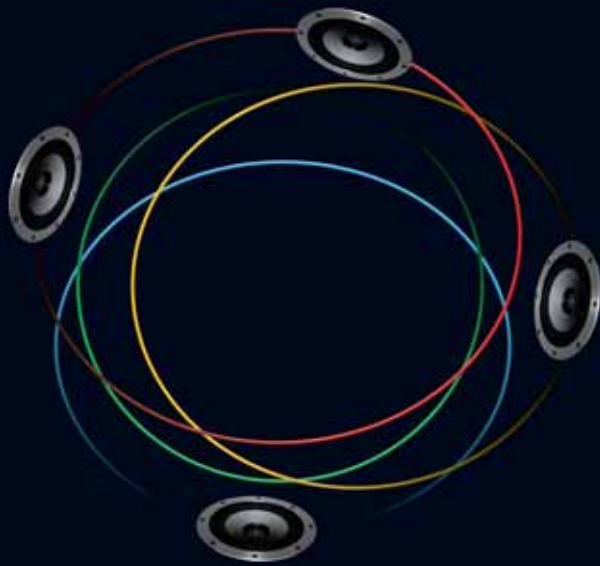

### Give your hearing the surround sound experience

 SURROUND  
SOUND  
by ReSound

## ReSound

rediscover hearing

The surround sound experience means enjoying sounds the way they were meant to be heard.

## The surround sound difference

Just like going from a set of stereo speakers to a fully customised surround sound system, ReSound Live™ reawakens the senses to deliver a unique surround sound experience that puts you back in the centre of life.

With a greater sense of awareness – of being there – you'll enjoy fuller, richer and more detailed sound quality. You'll be able to locate where sounds are coming from more easily and enjoy conversations even in noisy environments. In addition to this, ReSound Live™ comes in a variety of appealing, comfortable and discreet designs.

No longer living life on the sidelines you can reengage with family and friends and experience sounds the way they were meant to be heard. Sounds in full detail. Sounds in surround.

## Put yourself back in the picture

“ *Whether I’m in a restaurant, out walking or in the car, the sound quality is top notch. It gives me a rich and detailed sound, and I feel in touch with the world around me. Plus, I spend a lot of time outdoors and wind noise is not a problem anymore, which is great.* ”

Powering ReSound Live™ is surround sound by ReSound, a highly advanced technology platform that features our revolutionary surround sound processor. Just like the human ear, this unique technology processes bass and treble sound streams separately, ensuring you benefit from:

- Richer and more natural sound quality
- Clear understanding of speech even in challenging listening situations
- Vastly improved awareness of surroundings
- Enhanced ability to locate sounds

## Tune into richer, purer sound quality

The surround sound by ReSound platform includes state-of-the-art technologies that vastly improve your listening experience, delivering brilliant clarity and full-bodied sound quality.

### **Richer, more natural sound**

ReSound Live™ has highly advanced sound compression and noise reduction features that deliver extremely natural sound quality without noise, wind noise and distortion. The addition of WhistleControl™ prevents embarrassing whistling or “squealing” – even in the most challenging situations like on the phone.

“ *I’m no longer overwhelmed by situations or feel left out, which just changes everything for me. When you’re not worrying about missing out on conversations or things happening behind you, it gives you a huge boost of confidence.* ”

### **Hear conversations clearly in any environment**

ReSound Live™ delivers impressive speech understanding even in the noisiest situations. In combination with the innovative surround sound processing this vastly improves your awareness of your surroundings and your ability to locate which direction sounds are coming from.

For example when walking and talking in a busy street, you will be able to hear conversation clearly while still hearing when and where a car is coming from. Or if you’re at a party or in a crowded restaurant you’ll be able to listen to the person across from you while still being aware of the person next to you or a waiter asking you a question. In short, you’ll be perfectly in tune with the world around you.

# Sound by design

“ I've gotten used to them really quickly and have lost count of the number of times I've worn them to bed. You simply forget you're wearing them.

ReSound Live™ is available in a wide variety of models, making it easy for you and your hearing care professional to find one that suits your needs and preferences best.

Two of our new innovative designs are described below with the remainder of the range listed beneath. All offer an unbeatable combination of discretion, comfort and performance.

---

**RESOUND LIVE™ WITH RECEIVER-IN-THE-EAR**  
Practically invisible when you wear it, this sits comfortably behind the ear and includes a number of features not found in comparably sized instruments, including telecoil options, program button and volume control.

---

**RESOUND LIVE™ CIC WITH REMOTE MICROPHONE**  
Small but powerful, this innovative designed hearing instrument sits comfortably and invisibly in the ear canal, ensuring you'll have no problems with wind noise. And the automatic programming means it is simple to use.
